DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 2. Claims13-20, 22-51 rejected under 35 U.S.C. 102(b) as being anticipated by Shea (5314087).

Shea discloses an inner container assembly (1, 5, fig. 1), designed to be removably inserted into an outer container (6, fig. 1) comprising a bottom, collapsible (clearly inherent as discussed in col. 2, lines 30-34) opposing first and second side walls and front and back walls (fig. 1), each constructed of a flexible insulating material (13, 27, fig. 2a) having one metalized surface (29, fig. 2a) the first and second side walls and the front and back walls forming an integral moisture proof seal with the bottom and each other, an integral foldable side, front and back flaps (12, fig. 1) extending above the side walls, front wall and back wall, comprising a top edge that is substantially straight along its entire length (see fig. 4, Shea discloses, col. 4, lines 35-47, to combine two containers, 1 and 5).

Regarding claim 17, Shea discloses that front and back walls (see fig. 1) each have a gusseted reinforcement.

Regarding claims 18 and 19, Shea discloses a selectively releasable means (see col. 3, lines 14-15) for securing the first side flap to the second side flap.

Application/Control Number: 09/492,811

Art Unit: 3721

Regarding claims 20-22 and 30, Shea discloses that the front flap is connected to the edges of both the first and second side flaps and they are integral (see fig. 1).

Regarding claims 23-24, Shea discloses that the top is formed with the front and back flaps folded.

Regarding claims 25, 31 and 39, Shea discloses that the bottom is substantially flat.

Regarding claims 32-33, 36 and 40, since the inner container is collapsible it is an inherent design feature that side walls are perpendicular to the bottom in the open position and parallel to the bottom in the folded position and the side walls in the folded position have a length and width that is no greater than the bottom.

Regarding claims 46-51, Aghassipour teaches a container (22, figs. 5-6) having a metalized surface (15, fig. 1a-1b) extending throughout the wall to keep cold contents cold for substantially long periods of time (see col. 1, lines 45-65). Therefore it would have been obvious to one having ordinary skill in the art at time of invention to provide a metalized surface (15, fig. 1a-1b) extending throughout the wall as taught by Aghassipour to keep cold contents cold for substantially long periods of time.

7. Alternatively, Claims 13-45 are rejected under 35 U.S.C. 103(a) as being unpatentable over Shea (5314087) and Aghassipour and further in view of McCord (728749).

This rejection is made to further show the well-known use of collapsible container in the packaging art. Shea's modified container, as mentioned above, shows a

Page 4

Art Unit: 3721

collapsible container but may not show collapsible sidewalls and the top edge that is substantially straight along its entire length.

However, McCord teaches a collapsible container (A, figs. 1-5) having collapsible side walls (A3, figs. 1-3) and the top edge that is substantially straight along its entire length (see figs. 1-3) to provide a strong box and at the same time one which can be readily folded whenever desired (see lines 75-79). Regarding claims 32-33, 36 and 40, McCord teaches that side walls are perpendicular to the bottom in the open position and parallel to the bottom in the folded position (see figs. 2 and 5) and the side walls in the folded position have a length and width that is no greater than the bottom (see fig. 5). Therefore it would have been obvious to one having ordinary skill in the art at time of invention to provide a collapsible side walls box structure as taught by McCord in the modified inner container of Shea to provide a stronger box and at the same time one which can be readily folded whenever desired

Response to Arguments

- 3. Applicant's arguments with respect to claims 13-20, 22-51 have been considered but are most in view of the new ground(s) of rejection.
- 4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Hemant M Desai whose telephone number is (703) 308-5830. The examiner can normally be reached on 7:00 AM-5: 30 PM, Mon-Thurs..

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Rinaldi I. Rada can be reached on (703) 308-2187. The fax phone numbers

Application/Control Number: 09/492,811
